

Personal Branding

Name: Youstina Abdelmesehe Nakhil.

Group code: Nxt14_onl3_swd2_s3.

About:

Computer Science student and Frontend Developer specializing in React.js. Skilled in HTML, CSS, JavaScript, TypeScript, Data Structures, Algorithms, C, and Java.

I enjoy solving programming challenges and creating high-quality websites. Looking to work with companies that value dedicated developers who bring creativity, leadership potential, and a collaborative approach to their teams.

Open to new opportunities in frontend development.

LinkedIn account:

<https://www.linkedin.com/in/youstina-abdelmesehe-4b983a31b/>

My strength points:

1-**Listening**: I can listen the client for long time and check the details for him without complain.

2-**Insistence**: I always want to make the choices of the client even if they are difficult, not easy for me or it's my first time to do it.

3-**Good Impression**: Smiling is a good first impression the client wants to see from the developer, so it will be a good point for me of course.

4-**Computer-science student**: For the clients, they definitely want a developer that has information in networking or hardware overall for their work, and by default we, as cs student, know a lot of information about computer's software and hardware.

5-**Relationships**: Knowing Doctors and cs student will increase the chance to know courses and clients.

6-**Frontend developer**: I'm frontend developer uses React.js, and also work with bootstrap, CSS, TypeScript and JS, Knowing a little in PHP.

7-**Basics of Programming**: As I know OOP with Java, Problem solving, Algorithm, Data structure, C, and Python.

8-[GitHub](#): Having an account on Git Hup helping me to show my projects for the clients and to put them in my portfolio.

The skills I have that not everyone has:

- 1- [Always learning](#): If the client wants something that I don't know, I will learn it and will not refuse the offer if I have time to learn it. I also will learn without request from the client.
- 2- [Constant follow-up](#): I will send to the client a copy from my work every week or every time we decided to send it, as the client will be comfortable and has trust in me.
- 3- [Before Deadlines](#): sending the work to the client before the deadlines is a good skill that every developer should has.

Clients that I work with:

Clients that I want are who have knowledge in the field about the salary and good quality for the website, that want a perfect website without Discuss about the money more than it should take.

Also I want my work to reach tech companies that want a hard-work Frontend developer work with React.js or another framework that I know.

How I reach them?

From the freelancing applications and applications for finding jobs like LinkedIn and Glass Door.
